

Territory resource management system

RELEVANCE

Aspects of harmonious spatial development:

- Economic and social cohesion
- Preservation of natural livelihoods and cultural heritage
- More balanced competitiveness
- Life safety and protection

BENEFITS

Transparent mechanism for taking into account interests

Holistic spatial development of the territory

Definition of development directions

Ensuring efficient land use

Attraction of additional investments

Meeting the social needs of the population

Easy access by posting information on the geoportal

OUR SERVICES

- ✓ Orthophoto plans of medium and large scales from 1:1000 to 1:10000 (GSD up to 5 cm);
- ✓ Orthophoto plans of a high resolution in scale 1:10000 (GSD up to 5 cm).
- ✓ Digital model relief from mesh 2x2 m;
- ✓ Large scale digital cartographic products in scales from 1:500 to 1:1000;
- ✓ Horizontal relief with given crop;
- ✓ Hybrid cartographic products of data;
- ✓ Processing of raw data (images, clouds of dots)
- ✓ Vectorization of objects by orthophoto plans and stereo pairs;
- ✓ Creation of geoportals based on ArcGis
- ✓ Binding raster images;
- ✓ Determination of heights using stereo pairs;
- ✓ Transferring data from paper to vector form.

EXPERIENCE AND QUALIFICATIONS

We have all the expertise needed to carry out projects to create effective resource management systems of territories. Our company collaborates with international institutions such as the World Bank, USAID, UNDP on their projects. Our specialists are experienced in solving both standard and non-standard tasks in the field of land surveying, geodesy, decoding, geodata processing and project management. BlomInfo-Ukraine (BIU) teams of certified surveying engineers are equipped with certified surveying equipment. We hold the necessary licenses and permits to carry out the work.

FULL TECHNOLOGICAL CYCLE

Our technological capabilities allow us to cover the entire cycle of work from aerial photography and data processing to data integration in GIS and software development.

VERSATILITY AND MOBILITY

We have the opportunity to perform work for various territories (including cities and other settlements).

RESULT GUARANTEE AND COMPETENCE

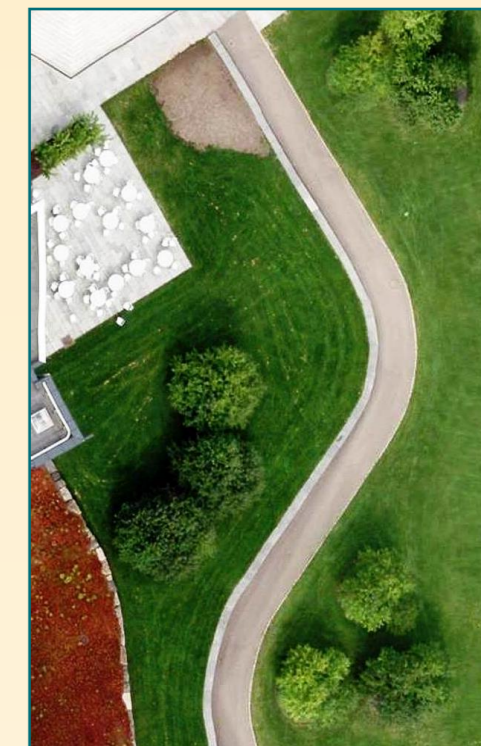

We have experience in the implementation of land inventory projects, recording of destruction, processing of geodata, creation of databases and their filling. For the past 3 years, we have been providing services for maintaining databases and keeping information up-to-date. We are perfectly oriented in the technical features of GIS projects in accordance with the international norms and standards. Our experience and qualifications guarantee that the project will be completed in due time with the required quality and within the set budget. Our reputation does not allow us to make mistakes

ORIENTATION ON YOUR OPPORTUNITIES AND NEEDS

Each project that we carry out is special. There are no template solutions for us. We are always ready to offer the optimal solution that will take into account your budget, deadlines and an effective set of data required for your further work.

ADVANCED TECHNOLOGIES AND SOLUTIONS

BIU is capable of executing a geospatial data project of any complexity. We have the most modern technological solutions for the collection, processing and presentation of geospatial data. The use of innovative technologies by BIU will make your project more effective and cover a wide range of tasks that affect the sustainable development of the territory of a settlement or region.

BlomInfo-Ukraine is one of the largest providers of professional mapping services in Ukraine.

We have been working since 2005.

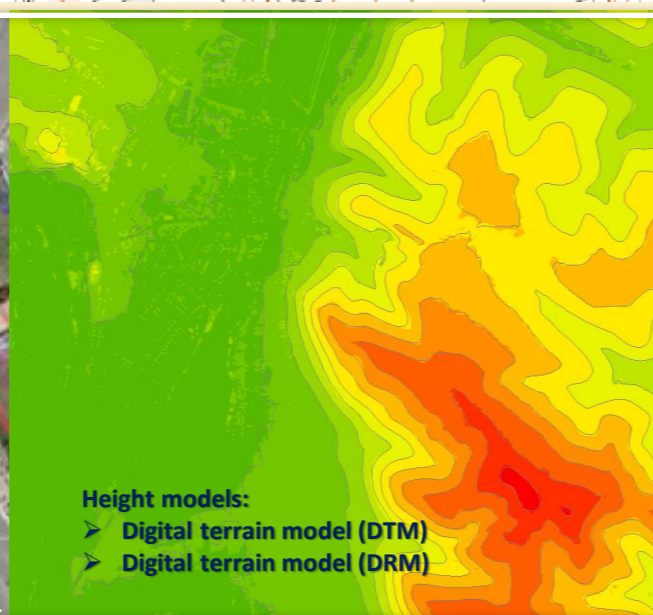

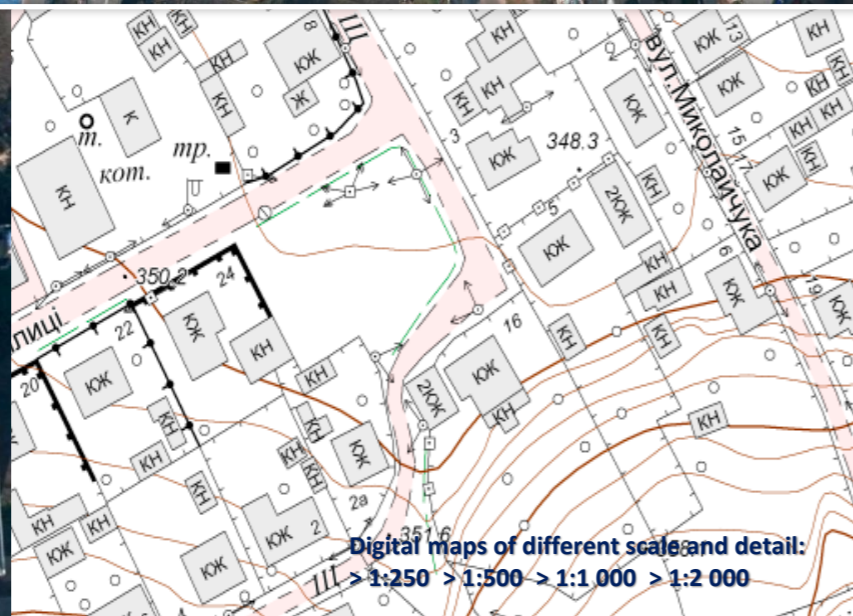

Our team of specialists includes 26 employees, including photogrammetrists, GIS operators, cartographers, surveyors and land managers.

We are fully technologically and professionally equipped, which allows us to carry out any complex project related to land management and creating cartographic products.

There are no similar projects for us.

Each project is special for us and we always strive to offer our Clients optimal solutions.
